

EMPERORS DAO

**“
Victorious warriors
win first and then go to
war, while defeated
warriors go to war first
and then seek to win.
”**

- Sun Tzu

Enter The Dynasty.

Emperor DAO (\$EDA0) is an Auto-staking Protocol which allows users to receive a high % rewards without staking and locking tokens, by simply holding the token in their wallet.

Long gone are the days of dedicated staking platforms. \$EDA0 is revolutionising BSC, using WEB-3 tech, in order to create an experience that is user-friendly and seamlessly integrated.

The mechanism that allows us to offer 420,000% APY - an amount worthy of royalty - is comprised of 5 key elements.

- Auto-Compounding
- Emperors Chest (EC)
- Dynasty Funds (DF)
- Sacrifice
- Rebase

ASP, short for Auto-staking protocol, will give you tokens automatically, by staking and compounding your tokens with a phenomenal fixed APY at 420,000% for the first 12 months, based on \$100k volume per day.

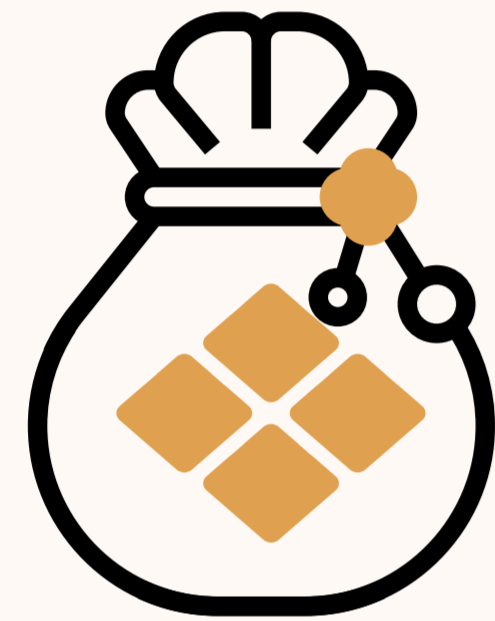

Emperors Vision.

Emperor DAO (\$EDA0) is focused on providing an astounding experience to the devoted followers. Our journey will begin with the initial offering on Pancakeswap, but our vision is set on the horizon. Alongside a cutting-edge website & dApp, we are focusing on creating a safe-haven for future Launches.

Our goals are set but not limited to:

- Working dApp to monitor your compounded interest.
- Dynasty Pad. A place for all Emperors to launch their Ventures.
- Dynasty VIP access. Holders of \$EDA0 will receive exclusive access to IDO's.

Emperors Chest.

The **Emperor's Chest (EC)** plays a very important role in our ASP protocol. It provides three extremely critical functions for the growth and sustainability of our Kingdom.

The EC functions as additional financial support for the **Dynasty Fund**. This additional support can become important in the event of an extreme price drop of the \$EDAO token or unforeseen black-swan event. It helps to establish a floor-value for the \$EDAO token.

The EC will also be used to expand the Emperor's footprint, fund for new Ventures and nourish the Warriors in our Kingdom.

Dynasty Fund.

The **Dynasty Fund (DF)** uses an algorithm that backs the Rebase Rewards and is supported by a portion of the buy and sell trading fees that accrue in the DF wallet.

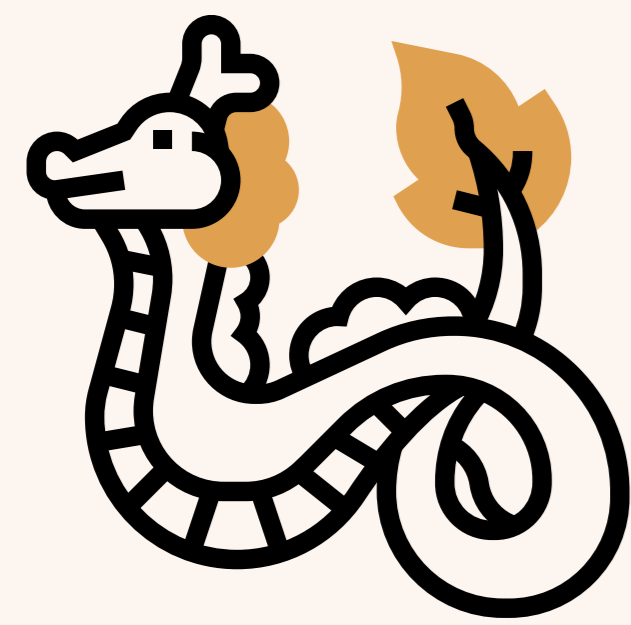

In simple terms, the staking rewards (rebase rewards) which are distributed every 15 minutes at a rate of 0.029% are backed by the **DF** parameter, thus ensuring a high and stable interest rate to **\$EDAO** token holders.

2% of trading fees are stored in the **DF**, which helps sustain staking rewards provided by the positive rebase.

DF Keeps holders safe by:

- Avoiding flash crash through price stability
- Achieving longterm sustainability and future growth of the Kingdom
- Greatly reducing downside risk

Sacrifice.

The **Sacrifice** is where 2% of all the fees go. As volume increases, the **Sacrifice** grows in size, increasing through self-fulfilling Auto-Compounding, reducing the circulating supply and keeping the Kingdom stable.

The **Sacrifice** wallet is a null wallet and no one can ever access it. It has no keys associated with it and nothing can be retrieved from it ever.

The biggest beneficiary of this deflationary mechanism is the individual **\$EDAO**, which grows increasingly scarce and valuable as more is sent to be sacrificed and never return due to it being a null wallet address.

Fee Breakdown.

Buying (11%)

5% Emperor's Chest

2% Dynasty Fund

2% Sacrifice

2% Liquidity Pool

Selling (13%)

5% Emperor's Chest

4% Dynasty Fund

2% Sacrifice

2% Liquidity Pool

“
In the matching of words with
deeds, we are inferior to the
barbarians. The remedy is to
seek the causes in ourselves.
This can be changed at once if
only the emperor would set us
in the right direction.”

- Feng Guifen
